

Catamaran- Lesson 1

Take out and file down the parts as seen in the pic

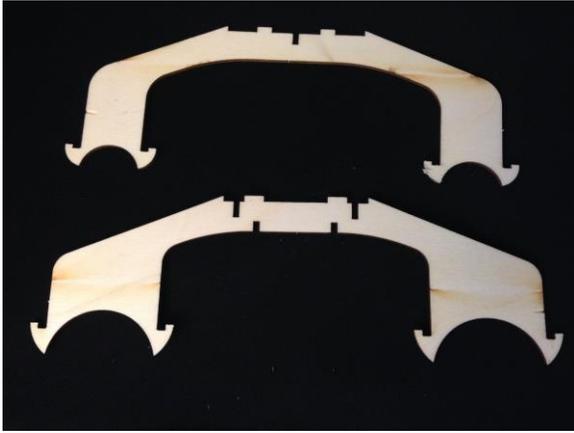

Glue the small triangles to the sides

Glue large triangle to the front (make sure all the pieces are on the same side of the base)

This is how the model looks so far

Break and file down the parts as shown in the picture

The part with the larger round holes would go in the back.

Once glued, make sure you have no space between the parts and the parts are connected correctly

The part with the smaller round holes goes in the front.

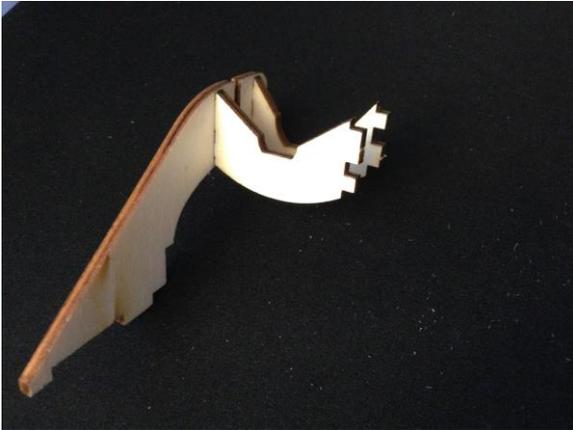

Once glued, make sure you have no space between the parts and the parts are connected correctly

This is what we have so far

Break and file down the parts as shown in the picture

Glue the parts to their place, make sure the part with the smaller crack is placed behind the part with the larger crack.

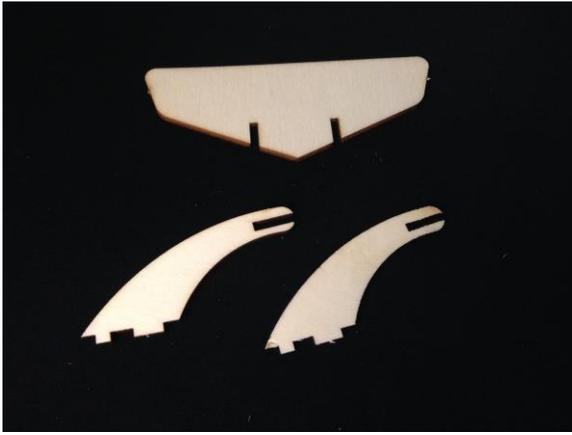

Glue the other piece on the other side

Lastly, glue the part we just assemble to the rear side of the base.

Please notice: Until now, all the parts we assembled are on the same side!

Break and file down the parts as shown in the picture

Glue the parts together.

DO NOT CONTINUE TO THE NEXT STEP!!!

If you have some spare time, hand markers to the kids and start painting the model.

IMPORTANT: For the next class, ask each student to bring 2 plastic bottles (of the same kind) and if they want to glue a small figurine they should bring it too.
