

Stegosaurus 3

Before starting, check all the parts from the previous lesson.

Cover the tables with table cloths.

This lesson we are going to glue the body parts.

Make sure to give the students instruction to proper glue usage.

CAREFULLY pop out the parts shown in the picture.

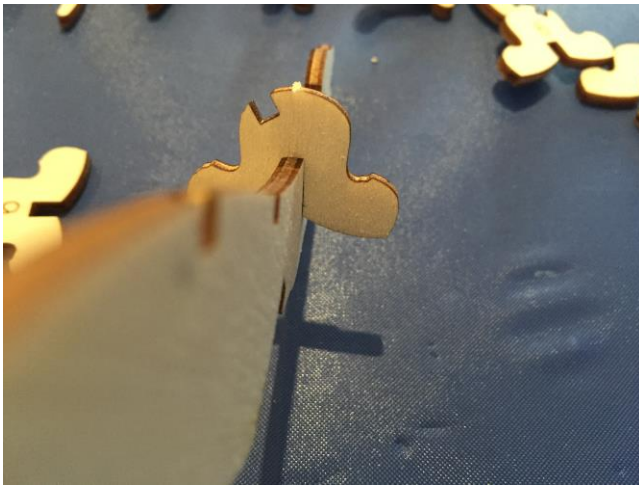

- Four parts #6
- Three parts #4
- Three parts #5
- 2 small ribs
- 1 body

We are going to glue the ribs to the body according to the numbers on the body.

Apply glue only in the cracks on the body.

Assemble the ribs one by one from right to left or left to right.

Notice the cracks on the top of each rib, make sure the cracks are not aligned.

Glue the first rib.

Here the crack is facing left.

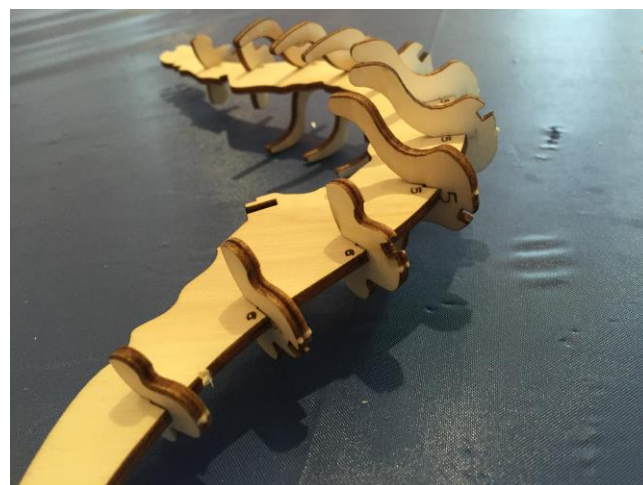

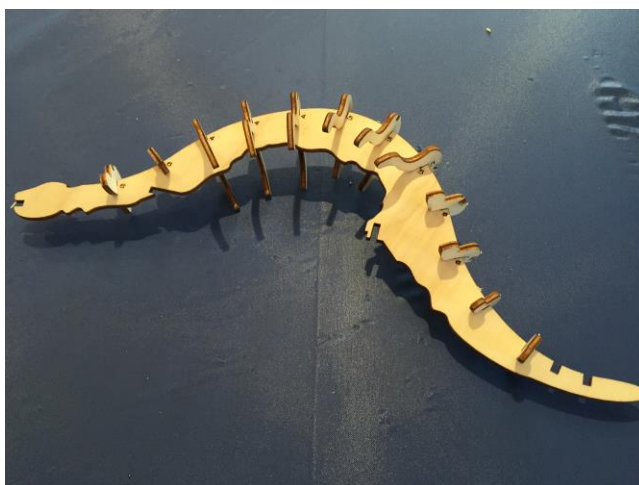

Then glue the 2nd rib.

Since the first rib's crack is facing left, this crack will face right.

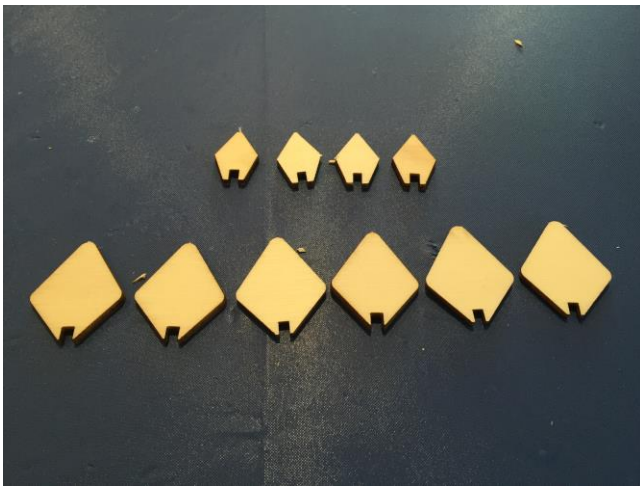

Continue gluing the ribs one by one, and make sure the cracks are facing once to the left and once to the right.

Once done, **CHECK ALL THE MODELS.**

Make sure the ribs are inserted completely onto the body.

Once checked, pop out the parts shown in the picture.

The small parts will be glued onto ribs #6

The larger ones will be glued to ribs #4 & #5

Glue the small parts to the small ribs.

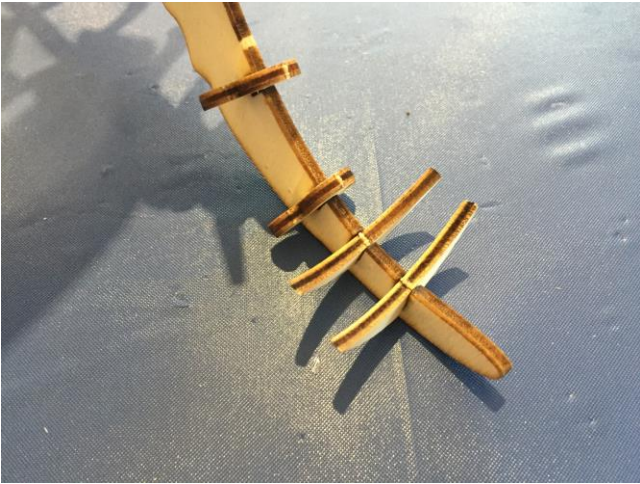

Then glue the large ones to the larger ribs

Once done,
double check
all the models.

Pop out the 2 parts shown in the picture.

Carefully glue them to the rear side of the body.

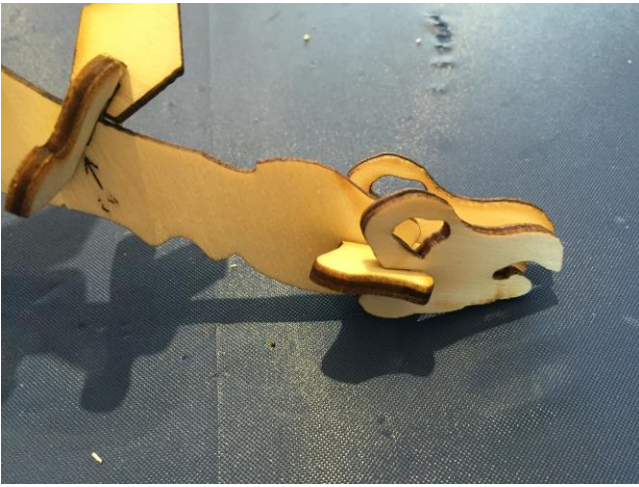

Check all the models, and continue to the head.

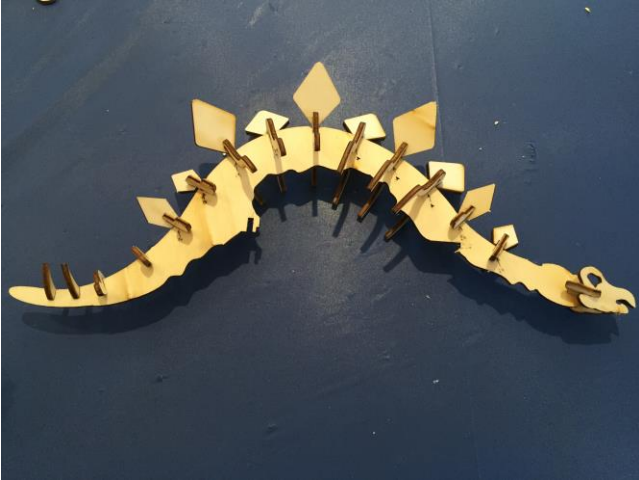

Carefully pop out the parts shown in the photo.

Glue both sides of the head

Once done, glue the head to the body.

This is the complete model.

If you missed a part you can continue it next lesson.

If you are done, collect all the parts, bags, and clean the class room.
