

Important specifics for lesson #1:

1. Call attendance. Make sure all the students present are enrolled in the class. In case one of the students is not enrolled, ask a school supervisor to take the necessary actions.
2. A student who is not enrolled WILL NOT be able to take the car home.
3. Take 2 to 3 minutes to really try and memorize the kids' names.
4. Present yourselves and the class (see file lesson introduction attached)
5. Start building the car. Make sure to give specific safety instructions, and make sure all students understand them.
6. Completely finish building the car. The students' cars should be operating and intact.
7. Go through each car with a set of batteries and make sure the cars are properly operating. No student may turn on their car in class.
8. Explain to the students that, when operating the car at home, they should put a pillow or stand in front of the car so it doesn't hit the wall.
9. Tell the students we will be starting a big project next week.
10. If the class is not full, you may ask the kids to invite their friends to join class. Their friends who join will also receive a car.
11. Let the kids take home their cars without batteries!
