

## Ferris Wheel 3

Before starting, check all the parts from the previous lesson.

Once checked, carefully pop out the large wheel.

Grab the flower part.

Make sure the center circle is facing up, then glue the wheel, insert the paddles to their right cracks in the large wheel.

One cart at a time.

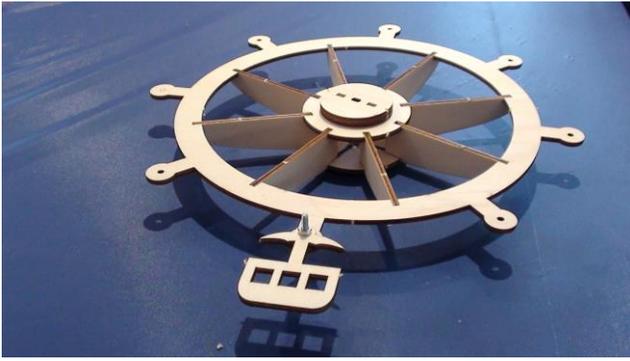

Hand the students one 15 screw and one NYLOCK locknut.

Place the cart on top of the large wheel (not under), insert the screw from the bottom part and lock it with the Nylock from the top.

Use the ranch to tighten the locknut.

Make sure not to over tighten it, **the cart should be able to move freely!**

Double check directions!

Before continuing, check the first cart and make sure it is positioned right.

Once checked, continue assembling the rest of the carts, one by one.

If you find yourself with extra time, have the students continue color their models.

If not, pack the parts back into the bags and clean the classroom. Do not dismiss the students before class ends.
